Software Engineer

PROFESSIONAL SUMMARY:

- Software Engineer with 5+ years of experience in designing, developing, and deploying enterprise-grade applications using Java, Python, and RESTful web services across cloud-native and microservices environments.
- Expert in building scalable backend services using Spring Boot, implementing CI/CD automation via Azure DevOps, GitHub Actions, and Jenkins, enabling rapid and reliable software delivery.
- Adept at deploying cloud-based applications using Microsoft Azure (App Services, Functions, Key Vault) and Amazon Web Services (EC2, Lambda, S3, RDS) for scalable, secure, and fault-tolerant infrastructure.
- Experienced with Google Cloud Platform (GCP) including Cloud Run, IAM, Pub/Sub, and Stackdriver, supporting hybrid cloud deployments and cross-cloud service integration.
- Proficient in containerization with Docker and orchestration via Kubernetes, ensuring efficient deployment and scalability of microservices in production.
- Delivered full-stack web applications with React.js and REST APIs, enhancing UX through responsive design, accessibility, and seamless client-server communication.
- Practiced in Agile/Scrum methodologies, participating in sprint planning, backlog grooming, and delivering incremental releases with continuous stakeholder feedback.
- Skilled in TDD and automation frameworks using JUnit, Mockito, and Selenium to ensure code reliability, coverage, and regression prevention in CI pipelines.
- Developed infrastructure-as-code (IaC) using Terraform for provisioning and managing cloud resources consistently across Azure and AWS environments.
- Implemented secure authentication and authorization using OAuth2.0, JWT, and LDAP protocols, ensuring robust access control for both frontend and backend services.
- Built real-time monitoring and logging solutions using ELK Stack, Prometheus, Grafana, and Azure Monitor, enabling proactive alerting and system diagnostics.
- Strong background in RDBMS and NoSQL databases including PostgreSQL, MySQL, and MongoDB; designed normalized schemas and optimized query performance.
- Integrated third-party APIs, SDKs, and services (e.g., payment gateways, email platforms, analytics tools) to extend core business functionalities.
- Led code reviews, mentored junior developers, and enforced software engineering best practices, promoting clean code, scalability, and maintainability.
- Refactored legacy codebases to improve performance, reduce technical debt, and align with OWASP security standards through static code analysis and secure coding practices.

TECHNICAL SKILLS:

- **Programming Languages** - Java, Python, JavaScript (ES6+), SQL, HTML5, CSS3, Bash, YAML
- **Frameworks & Libraries** - Spring Boot, React.js, Express.js, JUnit, Mockito, Selenium, Bootstrap
- **Cloud Platforms** - Microsoft Azure, Amazon Web Services, Google Cloud Platform
- **DevOps & CI/CD** - Azure DevOps, GitHub Actions, Jenkins, Git, Bitbucket, Terraform, Docker, Kubernetes
- **Databases** - PostgreSQL, MySQL, MongoDB, Azure SQL Database, Amazon RDS
- **Testing & Automation** - JUnit, Mockito, Selenium WebDriver, Postman, REST Assured
- **Infrastructure as Code (IaC)** - Terraform, AWS CloudFormation, Azure Resource Manager (ARM) Templates
- **Version Control & Issue Tracking** - Git, GitHub, Bitbucket, Azure Repos, JIRA
- **Monitoring & Logging** - ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Azure Monitor, Google Cloud Operations (Stackdriver)
- **Authentication & Security** - OAuth 2.0, JWT, LDAP, OWASP Security Practices, Azure Key Vault

- **API & Web Services** - RESTful APIs, OpenAPI/Swagger, Third-party API Integration (Payments, Emails, Analytics)
- **Containers & Orchestration** - Docker, Kubernetes, Azure Kubernetes Service (AKS)
- **Development Methodologies** - Agile (Scrum), Test-Driven Development (TDD), Continuous Integration & Continuous Delivery (CI/CD)

PROFESSIONAL EXPERIENCE:

Bank of America

Jan 2024 – Present

Software Engineer

Responsibilities:

- Developed RESTful microservices using Spring Boot deployed via Azure App Services to handle critical banking workflows, improving performance, scalability, and maintainability across cross-functional platforms.
- Built Azure Functions for event-driven processing, enabling real-time transaction monitoring and reducing response latency by integrating with service buses and function chaining within cloud-native workflows.
- Engineered CI/CD pipelines in Azure DevOps to automate testing and deployments, reducing release times by 40% while maintaining consistent quality across staging, UAT, and production environments.
- Integrated Azure Key Vault to centrally manage secrets, certificates, and credentials securely across services, ensuring compliance with enterprise-grade identity management and auditability standards.
- Deployed containerized applications using Docker and orchestrated via AKS (Azure Kubernetes Service), supporting auto-scaling and high availability for mission-critical financial applications.
- Created dynamic React.js components and integrated REST APIs to build seamless user interfaces for internal banking tools, improving front-end responsiveness and user engagement.
- Refactored legacy synchronous services using asynchronous processing and message queues to optimize throughput, decrease system load, and significantly improve transaction processing times.
- Worked with Azure SQL and Cosmos DB for high-volume data operations, improving query performance using indexing, partitioning, and connection pooling strategies for OLTP and analytics.
- Implemented robust authentication using JWT, Azure AD B2C, and RBAC to ensure secure access across services, reducing vulnerabilities and aligning with security compliance policies.
- Automated test execution using JUnit and Selenium WebDriver in CI/CD pipelines, increasing code coverage and reducing production bugs through consistent regression testing.
- Configured Azure Monitor and Application Insights for real-time performance tracking, enabling faster root-cause analysis and improved service uptime through proactive incident response.
- Created Terraform templates to provision Azure resources, enforcing consistency, eliminating environment drift, and supporting infrastructure-as-code best practices across all development stages.
- Collaborated in Agile ceremonies including sprint planning, retrospectives, and daily standups, accelerating feature delivery and improving cross-functional team communication.
- Authored OpenAPI (Swagger) specs for all APIs and mentored junior developers, improving onboarding, documentation accuracy, and developer productivity across the engineering team.

Walmart

Oct 2021 – Dec 2022

Software Engineer

Responsibilities:

- Developed and deployed scalable Spring Boot microservices integrated with Azure SQL and Google Cloud Storage to power transactional retail applications with hybrid cloud data sources.
- Delivered resilient backend systems using Azure Kubernetes Service and Google Cloud Run, enabling high-availability, auto-scaled microservices processing millions of customer orders and updates daily.
- Designed ETL pipelines with Azure Data Factory and GCP Dataflow to ingest and transform high-volume retail data from multiple systems into real-time reporting and analytics solutions.
- Built secure CI/CD pipelines using Azure DevOps and Google Cloud Build to enable zero-downtime deployments with automated testing, versioning, and rollback across cloud environments.

- Created modular, reusable React.js components integrated with RESTful APIs to modernize associate and customer-facing portals, improving UX and inventory management workflows.
- Integrated Azure Blob and Google Cloud Storage for cross-platform file management, enabling unified access to legacy and modern systems from within hybrid cloud microservices.
- Implemented OAuth2 and JWT-based API authentication and authorization, ensuring secure, encrypted service communication across Azure and Google Cloud-hosted APIs.
- Built asynchronous messaging systems using Apache Kafka and GCP Pub/Sub, enabling distributed microservices to decouple workflows, improve resiliency, and support fault-tolerant data processing.
- Automated background tasks using Azure Functions and Google Cloud Functions to streamline routine operations such as cache management, notifications, and file archival.
- Managed data schemas, migrations, and modeling in PostgreSQL and BigQuery, delivering fast, reliable analytics and reporting with normalized structures and custom indexes.
- Configured real-time observability using Prometheus and Google Cloud Operations, reducing MTTR by 40% through proactive alerts, performance dashboards, and log-based diagnostics.
- Led Agile rituals, authored system design documentation, collaborated with cross-functional teams via JIRA, and supported third-party API integrations for payments and logistics operations.

Pfizer

Aug 2019 – Sep 2021

Software Engineer

Responsibilities:

- Built healthcare analytics tools using Python and Flask to deliver clinical and research insights, integrating with internal platforms via secure, authenticated RESTful APIs.
- Developed AWS Lambda functions triggered by S3 and CloudWatch Events to process medical data serverlessly, reducing operational overhead and improving workflow responsiveness.
- Designed scalable ETL pipelines using AWS Glue and Python to transform large datasets, loading into Amazon Redshift and RDS for secure, HIPAA-compliant analytics reporting.
- Created data models in Amazon RDS (PostgreSQL) and authored stored procedures to support custom queries and optimized dashboard performance for internal reporting teams.
- Automated AWS infrastructure provisioning with CloudFormation templates to maintain consistent environments and reduce manual configuration across development and production stacks.
- Managed secure authentication and session control with AWS Cognito, supporting multi-user access for internal dashboards and patient-facing research portals.
- Used Amazon S3 to manage clinical data storage with lifecycle rules, ensuring cost-effective archiving, versioning, and retrieval for long-term research compliance.
- Monitored service performance using Amazon CloudWatch with custom alerts and logs, enabling early anomaly detection and reducing incident recovery time.
- Followed Agile practices, contributed to code reviews, maintained GitHub workflows, and enforced quality through static analysis and collaborative peer programming.
- Delivered services within strict HIPAA and data governance standards, documented deployment processes, and mentored teammates via tech talks and onboarding sessions.

Educational Details:

Master of Science in Computer Science - University of Bridgeport

Bachelor of Technology in Information Technology - Vignan's University
